

The bleachers are custom designed to each project's requirements. This provides optimum sight lines for spectators and maximizes the seating capacity required for the project.

The bleacher system consists of a galvanized steel understructure, formed aluminum footboards and risers and a choice of seating styles.

The bleachers are designed to meet all provincial.

Material : Hot-dip galvanized Steel and/or aluminum

We are able to provide bleacher systems of various sizes.

A system mainly made from aluminum material is lighter in weight and is resistant to corrosion, allowing for long-term usage.

The modular design makes for simple and quick installation and maintenance.

A small size can accommodate high usage for multi-purpose indoor and out door.

Standard specifications for the smaller bleachers are as follows:

Four row stands without back :4210\*2360\*2480(1640)

Aluminum bench :240\*60\*3550

Aluminum step : 240\*60\*4000

Four row stands have the safe rail

Three row stands without back :

Aluminum bench :240\*60\*3550

Aluminum step : 240\*60\*4000

Three row stands with low back :

Aluminum bench with low back :330\*110\*3500

Aluminum step : 240\*60\*4000
